

## *How is Hardy Green?*

We at Hardy Diagnostics strive to reduce energy consumption at our facilities and to conserve resources on our planet. Here are some of the projects we have completed recently...

*A Culture of Service*<sup>™</sup>

**Warehouse Lighting** - All older lights have been replaced with new high-efficiency T5 or T8 fluorescent lights with parabolic reflectors.

**Compact Fluorescent Bulbs and LED Lighting** - Old light bulbs (incandescent and halogen) have been replaced with low-wattage Compact Fluorescent or LED bulbs wherever possible.

**Recycle** – All paper, glass, cardboard, aluminum, and scrap metal are collected and returned to a recycling center.

**Occupancy Sensors** – Occupancy sensors have been installed in all restrooms, so lights turn on only when needed.

**Skylights** – Natural sunlight through skylights and solar tubes are used wherever possible in the office areas. Skylights have a reflective film to keep out 90% of the heat.

**Paper Packaging Material** – Recycled, biodegradable, non-bleached paper is used for cushioning in our outgoing packages.

**Air Compressors** – We have switched to a single large high-efficiency rotary screw air compressor for significant electrical savings.

**Awnings** – Installed on all south facing windows.

**Reflective Roof Surface** – Roofing has been re-surfaced with a highly reflective white membrane system, reducing building heat load.

**Reflective Film** – South facing windows have a film that reflects over 90% of the sun's rays.

**Heating and Air Conditioning** – All HVAC units have been replaced with high-efficiency models, using less power.

**On-Demand Water Heaters** - Wherever possible, in-line water heaters are used that turn on only when hot water is needed.
